0.1 *Dask for Machine Learning*

Visit the main Dask-ML documentation: <https://examples.dask.org/machine-learning/>

Why Dask? Pandas and NumPy are great libraries, but when it comes to large datasets, they are inefficient because they take longer to compute than smaller datasets. This is where Dask comes in. The first step to understanding Dask is to know one of the key features that sets Dask apart from the competition is that it is entirely written and implemented in Python. *The collection APIs of Dask is designed to scale NumPy, pandas, and scikit-learn natively. It uses parallel and distributed computing to overcome the limits of a single machine.*

0.2 *Dask Interfaces*

Install the necessary libraries before using/importing them

```
[ ]: # Install everything
!python -m pip install "dask[complete]"
```

```
Looking in indexes: https://pypi.org/simple, https://us-python.pkg.dev/colab-

0.3 *Train Models on Large Datasets*

- Most estimators in scikit-learn are designed to work with NumPy arrays or scipy sparse matrices. These data structures must fit in the RAM on a single machine.

- Estimators implemented in Dask-ML work well with Dask Arrays and DataFrames. This can be much larger than a single machine's RAM. They can be distributed in memory on a cluster of machines.

```
[ ]: from dask.distributed import Client, progress
client = Client(processes=False, threads_per_worker=4,
                n_workers=1, memory_limit='2GB')
client
```

```

Methodology:

- Scikit-learn uses joblib for single-machine parallelism. This lets you train most estimators (anything that accepts an `n_jobs` parameter) using all the cores of your laptop or workstation.
- Alternatively, Scikit-Learn can use Dask for parallelism. This lets you train those estimators using all the cores of your cluster without significantly changing your code.
- This is most useful for training large models on medium-sized datasets. You may have a large model when searching over many hyper-parameters, or when using an ensemble method with many individual estimators. For too small datasets, training times will typically be small enough that cluster-wide parallelism isn't helpful. For too large datasets (larger than a single machine's memory), the scikit-learn estimators may not be able to cope (see below).

0.3.1 *Importing necessary libraries:*

```
[ ]: from sklearn.datasets import make_classification
from sklearn.svm import SVC
from sklearn.model_selection import GridSearchCV
import pandas as pd
```

0.3.2 *Taking a small sample to test the show the normal flow*

```
[ ]: X, y = make_classification(n_samples=1000, random_state=0)
df = X[:5]
print(df)
```

```

```

0.3.3 Setting the Hyperparameters for GridSearchCV using SVC

```
[ ]: param_grid = {"C": [0.001, 0.01, 0.1, 0.5, 1.0, 2.0, 5.0, 10.0],
                  "kernel": ['rbf', 'poly', 'sigmoid'],
                  "shrinking": [True, False]}

grid_search = GridSearchCV(SVC(gamma='auto', random_state=0, probability=True),
                           param_grid=param_grid,
                           return_train_score=False,
                           cv=3,
                           n_jobs=-1)
```

```
[ ]: import joblib

with joblib.parallel_backend('dask'):
    grid_search.fit(X, y)
```

```
Exception ignored in: <function

```

```
[ ]: dask.array<concatenate, shape=(10000000, 100), dtype=float64,
      chunksize=(1000000, 100), chunktype=numpy.ndarray>
```

We'll use the k-means implemented in Dask-ML to cluster the points. It uses the k-means// (read: "k-means parallel") initialization algorithm, which scales better than

k-means++. All of the computation, both during and after initialization, can be done in parallel

```
[ ]: km = dask_ml.cluster.KMeans(n_clusters=3, init_max_iter=2,
    ↪oversampling_factor=10)
km.fit(X)
```

0.3.6 Conclusion

- Dask is a powerful library that provides parallel and distributed computing capabilities for large-scale data processing.
- With its various interfaces and compatibility with popular data science tools, Dask offers a convenient and efficient solution for working with big data.
- In the end, readers should have a strong understanding Dask and its capabilities, as well as the knowledge and skills to implement a machine-learning project using Dask.
- As the demand for big data processing continues to grow, the importance of tools like Dask will only increase, making it a valuable asset for anyone in the data science field.
